

Opti Temp, Inc is the recipient of the 2009 Michigan 50 Companies to Watch

Opti Temp, Inc is the recipient of the 2009 Michigan 50 Companies to Watch. This award celebrates high performing, second stage companies in Michigan that are known for their performance in the marketplace, with innovative products and unique processes. For more information visit: [Michigan 50 Companies to watch](#).

Donald Williams Founder of Opti Temp upon accepting the award said “I am honored to receive this award, but we are a team at OPTI TEMP INC. and as with any team, it isn't fair or accurate to give all of the credit for our success to one individual. My wife Ginny was with me from the beginning, packing and shipping our products, and doing the book work and the invoicing. Jim Childs started with us shortly after we started, first as our electrical engineer and now our President and Chief Operating Officer. Our Vice President of Engineering, Dan Dorn, joined us several years ago, and is the co-inventor of our primary patent. All of the OPTI TEMP employees have worked together as a team and enabled the company to be awarded the Outstanding Supplier Award by a major aerospace energy systems company in 2008 and Michigan’s Top 50 Award in 2009. I am accepting this award for all of the employees”.

Opti Temp designs and manufactures state of the art heat transfer solutions at their Traverse City facility located on International Drive. Opti Temp’s patented technology and innovative design capabilities have established them as a leader in the heat transfer industry for plastics, medical, military, mobile imaging, digital printing, and industrial applications. For more information about Opti Temp, visit the company’s website at www.optitemp.com.
